## SUMMARY

---

I am a Senior Site Reliability Engineer, certified 3X by AWS. I consider myself cloud agnostic as I have worked with the public cloud providers AWS, GCP, and Azure. I have more than 6 years of experience in the Cloud DevOps / SRE space. I am also a strong advocate of Infrastructure as Code. I have experience in setting up and maintaining SaaS infrastructure with in-depth observability, high availability, and security.

## SKILLS

---

- **AWS:** EC2, S3, DynamoDB, IAM, Lambda, ElasticBeanstalk, VPC, Route53, EMR, CloudWatch, CloudTrail, Certificate Manager, Systems Manager, Lex
- **GCP:** GKE, VM, IAM, GCS, GCR, DataProc, StackDriver
- **SCRIPTING AND PROGRAMMING:** Bash, Java, Ruby, Python
- **DEVOPS:** Terraform, Ansible, Puppet, Docker, Kubernetes, Atlantis, SignalFx, PagerDuty

## CERTIFICATIONS

---

- **AWS Certified DevOps Professional** | Nov. 2019
- **AWS Certified Solutions Architect Associate** | Jan. 2018
- **AWS Certified Developer Associate** | Aug. 2017

## WORK EXPERIENCE

---

### CARGURUS INC

*Senior Site Reliability Engineer*

**Cambridge, MA**

*Mar. 2021 to Current*

- Spearheaded the integration of AI to enhance infrastructure reliability, researching and shifting the direction of fault-testing toward Agentic Chaos Engineering (ACE) to handle non-deterministic system behaviors.
- Developed a custom Claude AI skill to automatically author blameless incident postmortems, reducing engineering effort and documentation time from hours to minutes.
- Participated in on-call rotations, owned the incident response process, and conducted blameless postmortems.
- Increased robustness by automation of workflows, process improvements, CI/CD pipelines, and integrated modern toolsets.
- Partnered with Engineering teams to ensure new services were production-ready.
- Evolved our tooling, logging, monitoring, and alerting systems to increase observability and transparency.
- Architected and implemented Prometheus Federation using Thanos.
- Contributed primarily from the Platform team during the AWS migration from on-prem production servers.
- Restarted CarGurus' public blogs (Revved) by becoming the first contributor by starting a two-part blog post series on Thanos.

## **TAMR INC**

*Senior DevOps Engineer*

**Cambridge, MA**

*July 2019 to Feb. 2021*

- Architected and developed multi-layered inter-connected terraform modules to spin up infrastructure in AWS. The resources spun up included EMR Hbase, IAM roles and policies, S3 buckets, Dynamodb table, Security groups and rules, EC2 instances. Wrote design docs and tutored developers from other teams to use best practices for developing terraform modules.
- Set up Atlantis for easier plan and apply functionality for terraform based Pull Requests.
- Wrote Ansible playbooks for pre-deployment configurations for virtual machines and to be used in conjunction with Packer to develop AMIs.
- Wrote scripts for Puppet agent/master for post-deployment configurations of virtual machines and some individual cloud specific custom facts to be displayed on the puppet dashboard.
- Scripted in Python to improve and maintain Tamr's Service Catalog.
- Imported complete infrastructure set up in PagerDuty for the entire company in Terraform.

## **OVERHEAD DOOR CORPORATION - GENIE COMPANY**

*Cloud DevOps Engineer*

**Dallas, TX**

*Apr. 2019 to July 2019*

- Architected and deployed the Disaster Recovery environment spanning multiple regions, that would get updated everyday and would be able to scale based on incoming traffic.
- Migrated a Ruby scripted web application into AWS infrastructure, using AWS ElasticBeanstalk and some Shell scripting.
- Developed automated tests (Groovy Scripts) and Load tests for RESTful APIs used for Alexa and Google home skill.
- Programmed and configured webhooks and fulfillment handlers in AWS Lambda for the Alexa Skill and GCP Actions for Google Home Skill.

## **GRANUBE SYSTEMS**

*Cloud DevOps Engineer / Software Engineer*

**Dallas, TX**

*July 2017 to Mar. 2019*

- Architected and developed an AWS cloud native cross-platform mobile application to configure, monitor and control Siemens' industrial IoT infrastructure (Sm@rt Gear).
- Programmed Pub/Sub based external TCP socket connection and MessagingCenter based internal data flow architecture to get the live stream of data from the server.
- Maintained data in sync on optimized storage space on the PLC and an SQLite database on the mobile device.
- Developed a terraform provider by mapping all the API functionalities and exposing them as resources to be used via terraform.

## **EDUCATION**

---

**Stony Brook University, SUNY**

Master's of Science, Computer Engineering

**2016**

**Sardar Vallabhbhai Patel Institute of Technology, GTU**

Bachelor's of Engineering, Electronics and Communication Engineering

**2015**

## **OTHER INTERESTS**

---

Biking, Traveling, Hiking, Cooking, Tae Kwon Do, Kickboxing
